# 2024 Annual Drinking Water Quality Report Town of Stanfield #1 – Big Lick Road

PWSID# 20-84-006

The Town of Stanfield is pleased to present to you this year's Annual Drinking Water Quality Report. This report is a snapshot of last year's water quality. Included are details about your source(s) of water, what it contains, and how it compares to standards set by regulatory agencies. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water and to providing you with this information because informed customers are our best allies. If you have any questions about this report or concerning your water, please contact the Town Hall at 704-888-2386 or the Public Works Department at 704-888-0498. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled Town Hall meetings held at 7:00 pm on the first Thursday of every month at 103 West Stanly Street, Stanfield, NC.

#### What EPA Wants You to Know

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which must provide the same protections for public health.

# When You Turn on Your Tap, Consider the Source

The water used by this system is purchased surface water that has been collected from the Narrows (Badin Lake) and Tuckertown Reservoirs. This water is then treated by the City of Albemarle, and transported to Stanfield, via Stanly County Utilities transmission lines. It enters Stanfield's system through the metered vault located at the intersection of Big Lick Rd and NC Hwy 200. Water Quality Reports are available from City of Albemarle at 704-984-9400 or <a href="https://www.albemarlenc.gov/departments/public-utilities/water-consumer-confidence-report">https://www.albemarlenc.gov/departments/public-utilities/water-consumer-confidence-report</a> and Stanly County at 704-986-3686 or <a href="https://www.stanfieldnc.com/wp-content/uploads/2025/04/Stanly-County-2024-CCR.pdf">https://www.stanfieldnc.com/wp-content/uploads/2025/04/Stanly-County-2024-CCR.pdf</a>

# Source Water Assessment Program (SWAP) Results

North Carolina Department of Environmental Quality (DEQ), Public Water Supply (PWS) Section, and Source Water Assessment Program (SWAP) conducted assessments for all drinking water sources across North Carolina. The purpose of the assessments was to determine the susceptibility of each drinking water source (well or surface water intake) to Potential Contaminant Sources (PCSs). The results of the assessment are available in SWAP Assessment Reports that include maps, background information, and a relative susceptibility rating of Higher, Moderate or Lower.

The relative susceptibility rating of each source for the Town of Stanfield was determined by combining the contaminant rating (number and location of PCSs within the assessment area) and the inherent vulnerability rating (i.e., characteristics or existing conditions of the well or watershed and its delineated assessment area). The assessment findings are summarized in the table:

# **Susceptibility of Sources to Potential Contaminant Sources (PCSs)**

Source Name	Susceptibility Rating	SWAP Report Date
Narrows Reservoir (Badin Lake)	Moderate	September 9, 2020
Tuckertown Reservoir	Higher	September 9, 2020

The complete SWAP Assessment reports for the Town of Stanfield, Stanly Co-West Stanly Dist, and the City of Albemarle may be viewed on the Web at: <a href="https://www.ncwater.org/?page=600">https://www.ncwater.org/?page=600</a>. Note that because SWAP results and reports are periodically updated by the PWS Section, the results available on this web site may differ from the results that were available at the time this CCR was prepared. If you are unable to access your SWAP report on the web, you may mail a written request for a printed copy to: Source Water Assessment Program – Report Request, 1634 Mail Service Center, Raleigh, NC 27699-1634, or email requests to swap@deq.nc.gov. Please indicate your system name, PWSID# 2084006, and provide your name, mailing address and phone number. If you have any questions about the SWAP report, please contact the Source Water Assessment staff by phone at 919-707-9098.

It is important to understand that a susceptibility rating of "higher" <u>does not</u> imply poor water quality, only the system's potential to become contaminated by PCSs in the assessment area.

### **Help Protect Your Source Water**

Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source(s) in several ways: dispose of chemicals properly; take used motor oil to a recycling center, volunteer in your community to participate in group efforts to protect your source, etc.

# Violations that Your Water System Received for the Report Year

During 2024, or during any compliance period that ended in 2024, we received 1 violation for exceeding maximum contaminant levels for TTHMs in September. However, the LRAA remained compliant. We received no violations for HAA5s. Through cooperative efforts with Stanly County Utilities, including increased flushing at critical stages, we continue to monitor the quality of water that Stanfield receives to assure this violation does not happen again and drinking water remains safe for all residents.

#### **Important Drinking Water Definitions:**

Not-Applicable (N/A) – Information not applicable/not required for that particular water system or for that particular rule. Non-Detects (ND) - Laboratory analysis indicates that the contaminant is not present at the level of detection set for the particular methodology used.

*Parts per million (ppm) or Milligrams per liter (mg/L)* - One part per million corresponds to one minute in two years or a single penny in \$10,000.

*Parts per billion (ppb) or Micrograms per liter (ug/L)* - One part per billion corresponds to one minute in 2,000 years or a single penny in \$10,000,000.

**Locational Running Annual Average (LRAA)** – The average of sample analytical results for samples taken at a particular monitoring location during the previous four calendar quarters under the stage 2 Disinfectants and Disinfection Byproducts Rule. **Running Annual Average (RAA)** – The average of sample analytical results for samples taken during the previous four calendar quarters.

Action Level (AL) - The concentration of a contaminant that, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Residual Disinfection Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

*Maximum Residual Disinfection Level (MRDL)* – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

*Maximum Contaminant Level (MCL)* - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

#### **Water Quality Data Tables of Detected Contaminants**

We routinely monitor for over 150 contaminants in your drinking water according to Federal and State laws. The tables below list all the drinking water contaminants that we <u>detected</u> in the last round of sampling for the particular contaminant group. The presence of contaminants does <u>not</u> necessarily indicate that water poses a health risk. **Unless otherwise noted, the data presented in this table is from testing done January 1 through December 31, 2024.** The EPA and the State allow us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Some of the data, though representative of the water quality, is more than one year old. Stanfield's drinking water is purchased from Stanly County. Stanly County purchased drinking water from the City of Albemarle. To see data tables of detected contaminants for Stanly County and the City of Albemarle, click the links at <a href="https://www.albemarlenc.gov/departments/public-utilities/water-consumer-confidence-report">https://www.albemarlenc.gov/departments/public-utilities/water-consumer-confidence-report</a> and <a href="https://www.stanfieldnc.com/wp-content/uploads/2025/04/Stanly-County-2024-CCR.pdf">https://www.stanfieldnc.com/wp-content/uploads/2025/04/Stanly-County-2024-CCR.pdf</a>

**Lead and Copper Contaminants** 

Contaminant (units)	Sample Date	Your Water	# of sites found above the AL	MCLG	AL	Likely Source of Contamination
Copper (ppm) (90 <sup>th</sup> percentile)	September 2024	0.091	0	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits
Lead (ppb) (90 <sup>th</sup> percentile)	September 2024	ND	0	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits

The table above summarizes our most recent lead and copper tap sampling data. If you would like to review the complete lead tap sampling data, please email us at administrator@stanfieldnc.com.

We have been working to identify service line materials throughout the water system and prepared an inventory of all service lines in our water system. To access this inventory, please email us at <a href="mailto:administrator@stanfieldnc.com">administrator@stanfieldnc.com</a>.

Lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Town of Stanfield is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in plumbing components in your home. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Before drinking tap water, flush your pipes for several minutes by running your tap, taking a shower, doing laundry or a load of dishes. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water. If you are concerned about lead in your water and wish to have your water tested, contact the Town of Stanfield by email at <a href="mailto:administrator@stanfieldnc.com">administrator@stanfieldnc.com</a>. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <a href="mailto:http://www.epa.gov/safewater/lead">http://www.epa.gov/safewater/lead</a>.

#### Total Trihalomethanes (TTHM) and Haloacetic Acids (five) (HAA5)

Disinfection Byproduct	Year Sampled	MCL Violation Y/N	Your Water	Range Low High	MCLG	MCL	Likely Source of Contamination
TTHM (ppb)	2024	Y	64	46-86	N/A	80	By-product of drinking water chlorination
HAA5 (ppb)	2024	N	47	33-47	N/A	60	By-product of drinking water disinfection

For TTHM: Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

For HAA5: Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

### **Disinfectant Residuals Summary**

Contaminant (units)	MRDL Violation Y/N	Your Water (RAA)	Range Low High	MRDLG	MRDL	Likely Source of Contamination
Chlorine (ppm)	N	0.67	0.20-1.43	4	4.0	Water additive used to control microbes

# **Asbestos Contaminant**

Contaminant (units)	Sample Date	MCL Violation Y/N	Your Water	Range Low High	MCLG	MCL	Likely Source of Contamination
Total Asbestos (MFL)	April 2020	N	0	N/A	7	7	Decay of asbestos cement water mains; erosion of natural deposits

**Microbiological Contaminants in the Distribution System** 

Contaminant (units)	MCL Violation Y/N	Your Water	MCLG	MCL	Likely Source of Contamination			
Total Coliform Bacteria (presence or absence)	N	ND	0	one positive monthly sample	Naturally present in the environment			
Fecal Coliform or <i>E. coli</i> (presence or absence)	N	ND	0	O (Note: The MCL is exceeded if a routine sample and repeat sample are total coliform positive, and one is also fecal coliform or <i>E. coli</i> positive)	Human and animal fecal waste			

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

End of 2024 Water Quality Report (Consumer Confidence Report) for Town of Stanfield #1 Big Lick Rd System
